15th international wireless communications and mobile computing conference

In June 2019, Dr. Lamiaa Basyoni, Dr. Aiman Erbad, Dr. Noora Fetais and Dr. Moshen Guizani represented Qatar University in the International Wireless Communications & Mobile Computing conference in Tangier, Morocco. The theme of this conference was "Connecting to the IoT". In this conference, this team won a best paper award for their paper "Empirical Performance Evaluation of QUIC Protocol for Tor Anonymity Network". In this paper, the team purposed "QuicTor" to help eliminate problems affecting the performance of the Tor network as the current design of its transport layer was lacking. "QuicTor" would replace the current use of TCP to Google's protocol "QUIC".
