

CSE and Industry

3rd CSE Industry Integrated Computing Curricula.

After the successful 2nd Workshop with industry senior practitioners in Cyber-Security (oct. 2016) the Department of Computer Science and Engineering (CSE) recently hosted its 3rd Industry Integrated Computing Education Curricula Workshop. The event was supported by Qatar National Research Fund (QNRF) through the Pro-SKIMA project. During this workshop, we invited Qatar University Alumni, industrial and academic members, in addition to experts in collaborative education from Europe. This time the workshop focused on the university alumni as their opinion is highly important: They are in the right position to give feedback about their experience regarding the adequacy of their academic training in their current occupations and to identify possible challenges and gaps they may have faced when they joined their workplaces.
