

CSE and Industry

How Smart is your Parking?

The involvement of external professionals in our curricula is of high mutual interest. Our students have the opportunity to benefit from professional feedback given by experts in their fields, and the companies and big projects in Qatar have the opportunity to meet and exchange with our students and increase their awareness about concrete needs and realizations in the country.

This was the case during last Spring term within the “Engineering Skills and Ethics” course. Smart City experts from Lusail Smart City and Aspire Zone Foundation have been invited to the demonstrations/competition session of the course. The students presented their prototypes and defended their ideas in front of these experts. “Some of the proposed ideas are highly creative and are an evidence of the students' personality” said Ibrahim Kocagoz, Project Manager – Smart City (Lusail City Development Project), who participated in the women session. Farouk Ibrahim, Senior Technical Architect (Aspire Zone Foundation) who was part of the mensession added “I see highly attractive designs and a great use of modern 3D tools. I am impressed how the students are quickly able to master such tools!”. The two experts helped selecting the best 3 proposals for each session. “Beyond the awards, the contact with the Smart City experts gave a great motivation to the students, and this is the best conclusion I can expect for this course. I really thank Lussail and Aspire Zone for their great collaboration” concluded Dr. Abdelaziz Bouras, CSE faculty who is teaching the course during this term.
